

Observations: 4/12/18

Day 1: Plants were planted one day before and so far, only plants (ST and NP) were mixed, theoretically meaning that the plant will only have traits from NP due to ST being neutral, but we still are not sure what the plant will turn out as.

Day 2: Plants on the guessing pod have started growing. Other than that, no other plant has started growing. So far it seems green and healthy, but we cannot yet determine what type of plant it is.

Observations: 4/23/18

Day 12:

ST/NP - 1/2 inch 1 1/2 cm (full light green, smallest)

Front Guess- 2 1/4 cm (purple stem)

Back Guess- 2 1/4 cm (tallest and has a brownish stem color)
