

Mudslides / Landslides

Totiona, Gabby, Jownira, Mohammed

THE CAUSE & WHY

When water is saturated from the surface and is mixed with the land which causes the land to be moist and dangerous

EARTH SYSTEMS & MATTER AND ENERGY

Geosphere, Hydrosphere, Biosphere

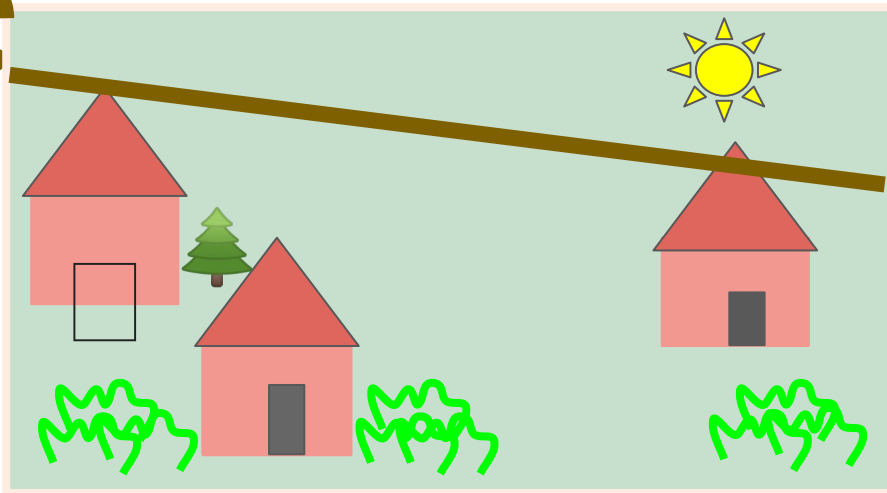

How are they AFFECTING the EARTH SYSTEM

Mudslides/Landslides can affect the earth systems because it can cause the Geosphere to ruin homes and roads which is also hard for the Biosphere to properly live, and also is the Geosphere breaking and falling apart. It also affects the Atmosphere because the rubble and the dust of the dirt can get in the air and make it hard to breathe.

How to PREVENT or STAY SAFE

People could make sure that they get in a safe place that they know can handle a lot of force, because during mudslides/landslides rocks and debris can fall and cause a lot of injuries. A storm shelter.
