

# WATER CRISIS: US PIPELINE

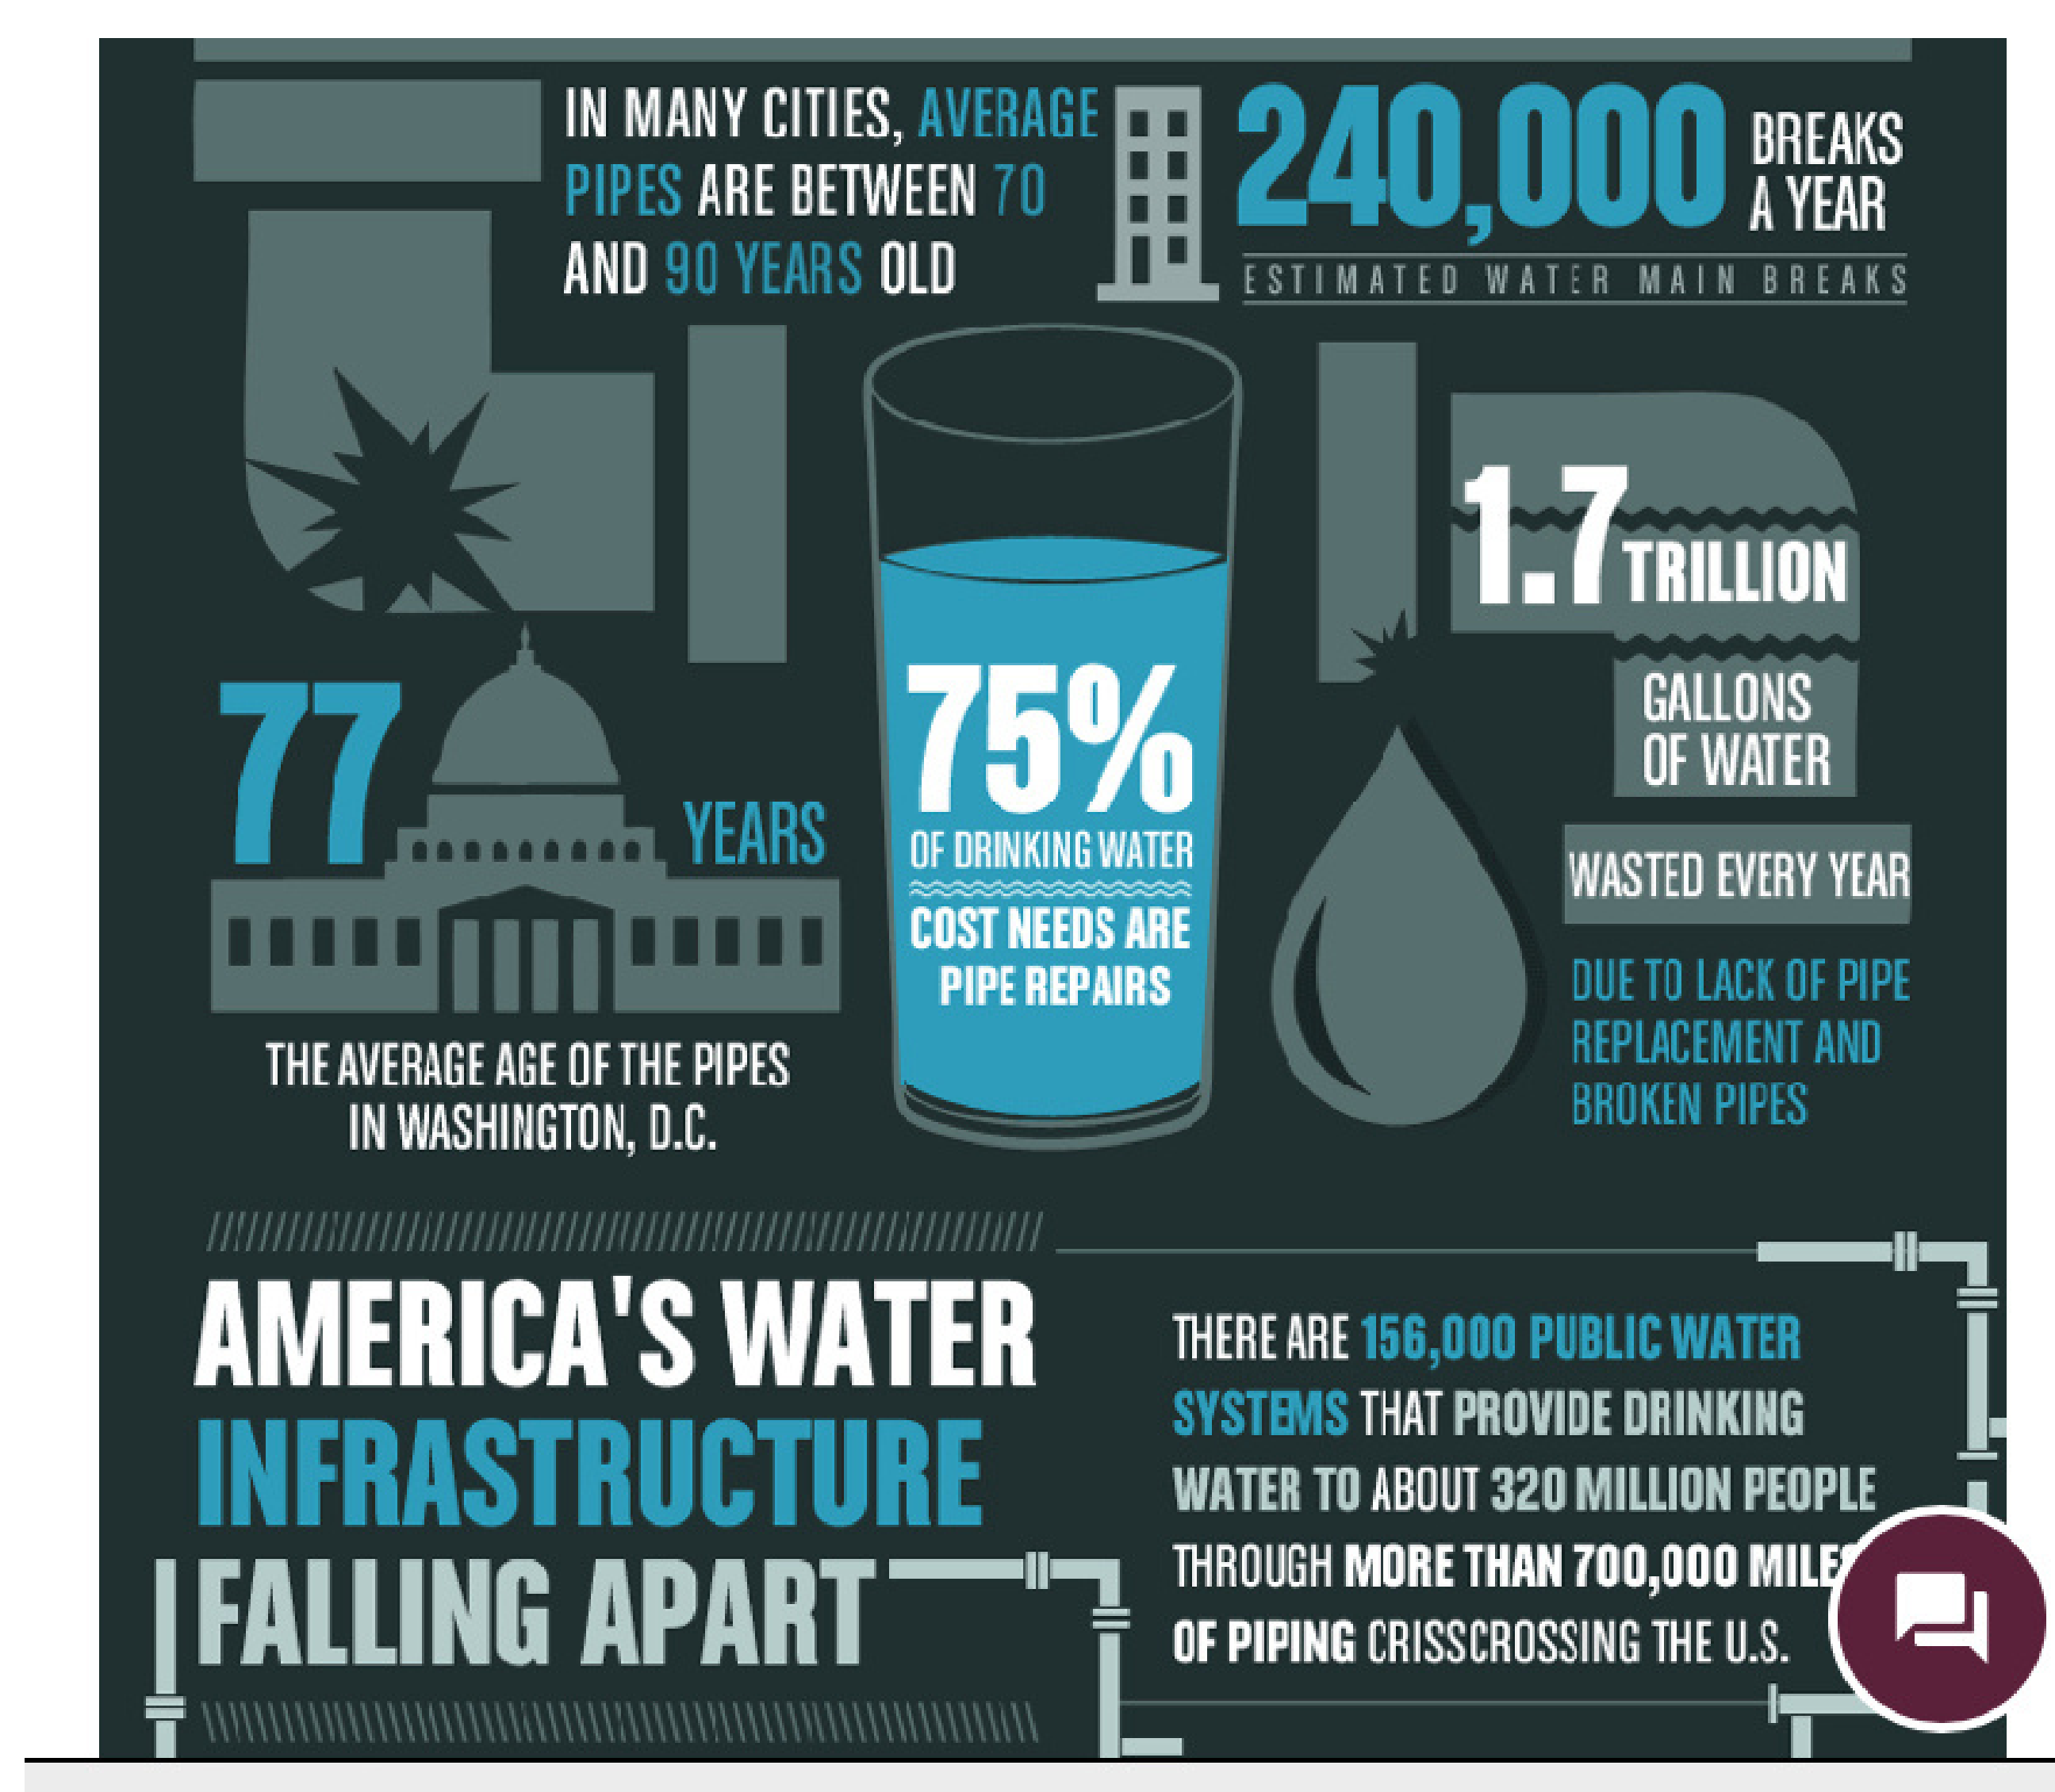

AUTHORS

Sakeric Lester and Anayh Guy

## Quick Facts

- The water infrastructure around America is over 100 years old
- It's the reason why some states in America have contaminated water
- For example, Flint, Michigan's water supply is terrible to the point where they have no safe water to drink

## Statistics:

---

## REASONS:

- Cast iron pipes last for about 120 years and were created in the 19th century
- Iron pipes last 50 to 70 years and were created in the 1950s
- These two types of pipes are decaying all over the US and are affecting water for the people in the states

---

## HOW CAN WE FIX THIS?

- It would cost about 1 trillion dollars to fix the pipeline. There's no other solution that would support the pipeline longterm

---

## SOLUTIONS?

- The only solution is for the government to spend the 1 trillion on the pipeline
