Jamil Myers And Amari
Technology & Society

1965

In the source it states "Two computers at MIT Lincoln Lab communicate with one another using packet-switching technology." This stands out to me because this an example of the evolution of device to device communication. - Jamil Myers

1974

"

Queen Elizabeth II hits the "send button" on her first email. I feel asthogh this had a big influence in that time period many didnt have other ways to contact and internet became a thing about 2 years before this.

1983

It states in the source that in 1983 The Domain Name System (DNS) establishes the familiar .edu, .gov, .com, .mil, .org, .net, and .int system for naming websites. This stands out to me because this is when the the website system got easier to browse through.- Jamil Myers

YOUR PARAGRAPH TEXT

1998

"The Google search engine is born, changing the way users engage with the internet." In the text they mention how it changes the way users engage with the internet, Google became a way to get answers to questions you didnt know the answers too along with google you had other features like gmail google was a huge hit for the internet as a whole

2005

Based off the information in the source in 2005 YouTube.com launches. The social news site Reddit is also founded. This stands out to me because this is the year two of some of the most popular websites were created. - Jamil
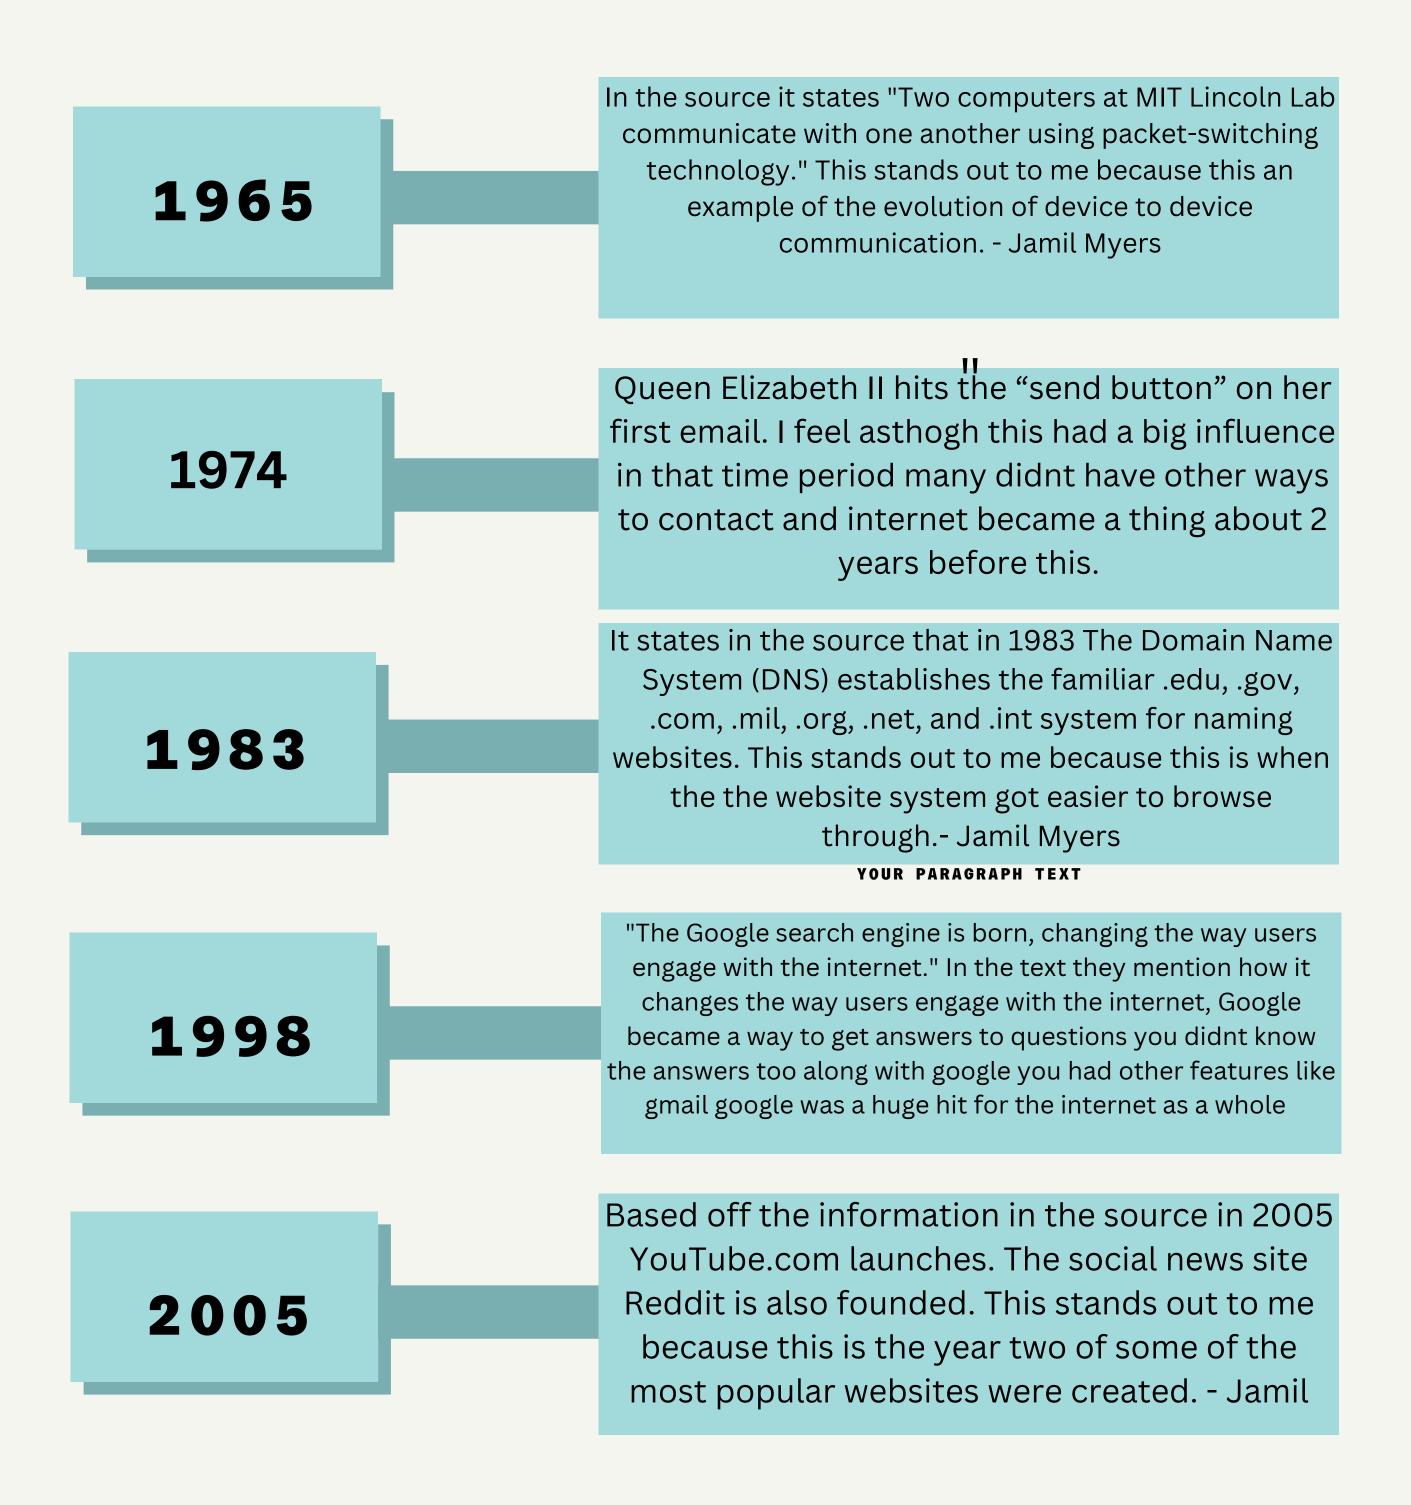

After reading the source about the events of technology we feel that technology does reflect society and shape it. We feel like this is true because most of the things we do are done with technology such as texting, calling, taking pictures, and taking videos. All are done with technology. We also feel like technology can improve our lives because most of the things we try to do manually are easier with technology. These things may include doing school work, reading, writing, sending letters, and researching. Therefore, this is the way we feel about technology and how it affects society.
