2012

the black lives matter movement was founded.

Obama announces date for Afghan withdraw

2014

**2016**

Marriage Equality law was passed, allowing all genders to be together.

We believe technology can improve our lives, but not all the time. Technology was a good discover considering how it can keep us safe, and help us with things we need to know.

However, technology can sometimes put us in danger. For example, scammers can try to get you to click something and they can access private information that you can stored in your computer, phone, and any other form of technology.

We also believe that technology can reshape or reflect it. Technology is where you hear about most things going on in the world. It can be on the news or social media. when society comes up with things like for example the black lives matter movement was talked about on social media. Many people use social media. so if SO many people use social media, culture can be reshaped because of the huge audience it has.
